

Mouse Genetics Core

Mouse Genetics Core

CORE MANAGERS: SEE SERVICE ^[1]

The Mouse Genetic Core provides a shared resource for the establishment of mutant mouse and cell models for DRC research. The Core coordinates DRC members with contacts to a number of UCSF-wide facilities for knock-out/knock-in and transgenic mouse generation. For more information as well as to initiate an order, please contact the specific websites and Core Managers listed for each service in the *Services* link above.

The Mouse Genetics Core also lowers the cost barriers (see *Rates* under services ^[1]) for the development of mutant models pertinent to type 1 and type 2 diabetes research.

CENTER MEMBERS ARE REMINDED TO ACKNOWLEDGE DRC CENTER GRANT (P30 DK063720) CONTRIBUTIONS WITH 'THIS RESEARCH WAS SUPPORTED BY GRANTS X, Y AND FROM NIH P30 DK063720'.
